

Property Strategies

Using the strategic review process we consider the following in the development of a Property Strategy;

- the demand for property
- space utilisation
- current property characteristics (ownership, condition, cost and so forth)

We carry out financial modeling, including Monte Carlo Simulation and review the ability of competing options to meet the needs of the organisation. The Property Strategy is then presented to the client to finalise the scope, findings and assumptions that enable the selection of the optimum recommendation.
